Darton Announces the New Vegas for 2019

Darton Vegas's, 2 of the most shootable, stable, single purpose target bows available!

Take your pick – They are the real deal!

VEGAS-T, THE ULTIMATE IN A SPOT BOW!

The **Vegas-T** features a uniquely designed riser with limb pockets designed for better control of limb alignment and a more controlled shot. The **Vegas-T** has a 38 ½" axle-to-axle dimension and an 8" brace height, with draw lengths available up to 32". The reduced power stroke, resulting from the higher brace height, makes this bow an excellent choice when competing in tournaments where shooter fatigue can become an issue. With its 8" brace height and stellar level of performance, arrow time on the string is reduced to a minimum. If you want to shoot your very best, experience less shooter fatigue, enjoy over-the-top forgiveness and have over-all shoot-ability a priority, than the **Vegas-T** should be your choice. You will not find any bow easier to hold on the spot. Available with 65% or 80% draw length modules.

SPECIFICATIONS:

SPEED: 315-320 FPS | AXLE-TO-AXLE: 38-1/2"

BRACE HEIGHT: 8" | MASS WEIGHT: 4.5 LBS.

DRAW LENGTHS (65%): 26"-32"

DRAW LENGTHS (80%): 26.5"-32.5"

DRAW WEIGHTS: 40, 50, 60, 70 | LET-OFF: 65% or 80% (adjustable)

VEGAS-3D, STRAIGHT SHOT TO THE PODIUM!

The **Vegas-3D** could be considered a compromise bow when compared to the **Vegas-T**. However, when compared to most any other bow it is a hand's down winner. The **Vegas-T** limb length has been shortened, resulting in a lower brace height and an increase in its power stroke at all draw lengths, while retaining the desired balance of the **Vegas-T**. This has produced more stored energy and better performance while retaining most of the shooting attributes of the **Vegas-T**. These changes have also made this bow better suited for the shorter draw archer that wants to shoot a **Vegas** with a little more speed. Available with 65% or 80% draw length modules.

SPECIFICATIONS:

SPEED: **325-330 FPS** | AXLE-TO-AXLE: **36-7/8"**

BRACE HEIGHT: **7-1/4"** | MASS WEIGHT: **4.4 LBS.**

DRAW LENGTHS (65%): **25"-31"**

DRAW LENGTHS (80%): **25.5"-31.5"**

DRAW WEIGHTS: **40, 50, 60, 70** | LET-OFF: **65% or 80%** (adjustable)
